

# Register Now for GVIRF Webinar: mRNA Vaccine Technologies for Global Health

## What is GVIRF?

The **Global Vaccine and Immunization Research Forum** is a global meeting that brings together the entire Vaccine and Immunization Research community, from basic immunology to implementation research, and from low to high income countries. The GVIRF is organized every 2 years by the US National Institute of Allergy & Infectious Diseases, the Bill & Melinda Gates Foundation (BMGF), and the World Health Organization. This webinar is the first of a series to be held between the biannual meetings.

## What are the goals of this webinar?

This webinar is hosted by the BMGF and will explore **mRNA vaccine technologies for global health beyond COVID-19**, with the goal of sharing information, promoting discussion, and enhancing networking between vaccine developers and implementers.

## Who is the target audience for this webinar?

Scientists, product developers, regulators, policy makers, implementers, and funders interested in the status and future of mRNA vaccines beyond COVID-19

## What topics will be covered?

Topics covered in this webinar will include the status of mRNA vaccines in terms of manufacturing, safety, regulatory considerations, and distribution challenges and then look at emerging technologies to overcome identified technical hurdles.

**Date:** Thursday, 14 October 2021

**Time:** 06:00 – 9:00 PDT / 15:00 – 18:00 CET

**Location:** Zoom Webinar
