

GS1 standards framework

Identify

Globally unique identification keys

Companies, Products, Locations, Patients, Providers, Assets, Logistics, Documents, Services, Shipments, Consignments

Capture

Automatic data capture

Barcodes and EPC-enabled RFID

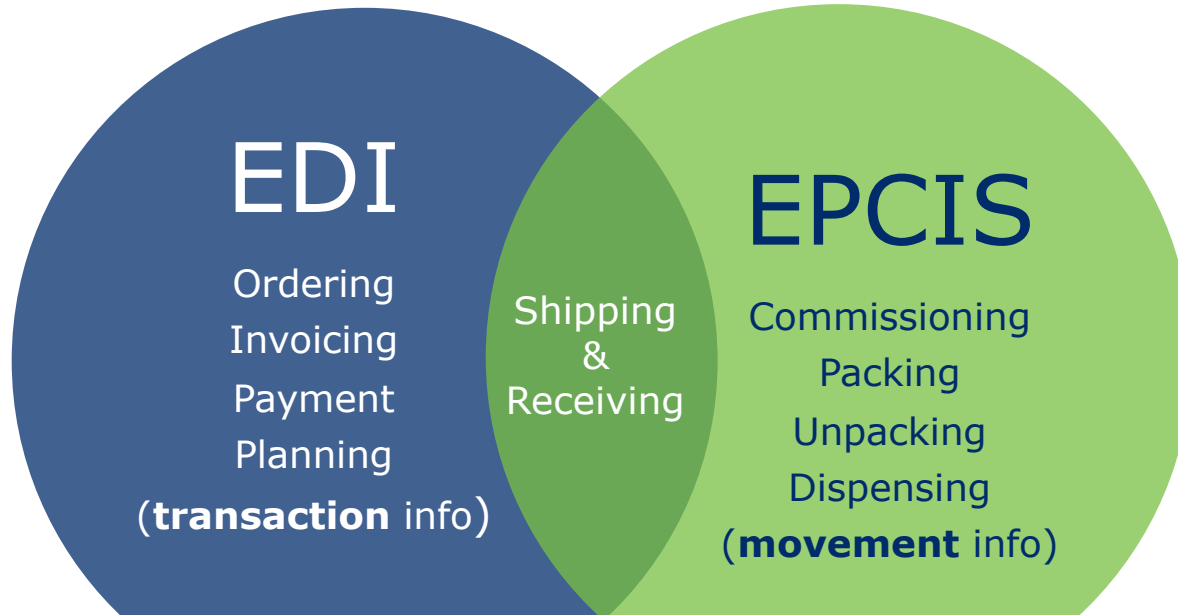

Share

Exchange of patient care & business critical information

Master Data, Transactional Data, Traceability & Event Data and Digital Content

Supply Chain Data Sharing & GS1 Standards

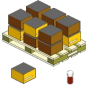

Master Data

Product & location descriptive attributes

EPCIS: a GS1 “Share” standard

- Enables data-carrier neutral sharing of supply chain visibility data
- Also published as ISO/IEC 19987
- Defines a framework data model, query & capture interfaces
- Business process steps are captured as **“events”**, which indicate:
 - **What** objects are the subject of event? 
 - **When** did this event take place? 
 - **Where** did the event occur, and where are the objects thereafter? 
 - **Why** did the event take place? 
 - **How** (*warm, humid, fast, radioactive, etc.*) are the objects? 
- **EPCIS 2.0**: first major update since 2007 launch, backward compatible

Supply chain visibility with EPCIS

- Tracking

Where are the vaccines we shipped on 8 June?

- Tracing

Which path did this shipment follow on its way to us?

- Chain of Custody

Which parties had contact with these products along the way?

- Inventory Management and Maintenance

*How much vaccine is **available** in inventory?*

*Which of the vaccines in our inventory **expire** soonest?*

*When are technical components due for **maintenance**?*

- Recall

Recall batch 102PQR packed on line 56A in calendar week 23 . . .

Product Traceability

e.g., “Where did a product come from and how was it made?”

Inventory

e.g., “Is there enough of the product in stock?”

Product Recall

e.g., “To which customer was a specific product shipped?”

Dimensions of an EPCIS event

What objects are the subject of event?

SGTIN, SSCC, GIAI, etc.

When did this event take place?

Date, time, time zone

Where did this occur..

...and Where are the objects thereafter?

Physical location (GLN)

Why did this event take place?

Process step, object status, link to transactions, etc.

How (*warm, humid, fast, etc.*) are these objects?

Sensor-monitored condition (**New in EPCIS 2.0!**)

```
{ "type": "gs1:MeasurementType-Temperature" , "value" : 26.2, "uom": "CEL" },  
{ "type": "gs1:MeasurementType-Humidity" , "value" : 12.2 , "uom": "A93"},  
{ "type": "gs1:MeasurementType-Speed" , "value": 162.0, "uom": "KMH"},
```

EPCIS enables tracking of **Aggregation** changes

- Parent-Child logistical hierarchy
 - Parent: one containing object
 - Children: one of more contained objects
- Captures **packing** and **unpacking** steps

- Keep track of logistic / packing hierarchies
- Enables the practice of **inference**

Packing

Location Identification
GLN
Global Location Number
0614141000043

Item & Case-Level Identification
DataMatrix
C01) 04012345123456
C21) AB1234
C17) 201206
C10) 20171009

SSCC
Serial Shipping Container Code

100 34012345123456789

Event 2

What	GTIN+Batch/Lot, SSCC
Where	GLN
When	2017-02-02, 09:30:14
Why	Packing

EPCIS deployments gaining momentum in 2022-2023

- **Rail** rolling stock visibility & MRO
- **Fish** packaging & distribution
- **Fresh Fruit & Vegetable** traceability
- **Maritime / Port** capacity utilisation management
- **Pharmaceutical** chain-of-custody
- **Pandemic** supply chain security

Inventory management of vaccines & PPE

EPCIS 2.0

New features to modernise EPCIS and lower adoption hurdles

EPCIS 1.2

(2016) provides support for:

XML

SOAP

EPC URNs

Bilateral sensor data

PDF-based code lists

EPCIS 2.0 (June 2022)

adds the following new features:

JSON & **JSON-LD**

REST API

GS1 **Digital Link** URIs

Reporting of detailed **sensor data**

Browsable **Linked Data** models for EPCIS and for the Core Business Vocabulary (CBV), along with updates to GS1 Web vocabulary
