

ACHIEVING MARKET ACCESS & EQUITABLE ALLOCATION OF VACCINES

September 2023
Presented to: DCVMN

EQUITABLE MARKET ACCESS TO VACCINES

Achieving market access for vaccines requires:

Equitable allocation of vaccines globally.

Establishment of a funding pool for regional manufacturers during a transition period

Transition from procurement of lowest cost manufacturers to procurement from local/regional Production.

Ensure economies of scale in local/regional manufacturing through volume allocation.

Establishment of minimum procurement and allocation by region.

Address the entire vaccine manufacturing value chain.

Allocation of vaccine IP and drug substance to regional manufacturers.

Utilize a mix of policy development and market economics to achieve equity.

Development of policies for a transition period to achieve cost parity.

Development of skills in, manufacturing, distribution, and public health. Market and non-market public policy
