ACHIEVING MARKET ACCESS & EQUITABLE ALLOCATION OF VACCINES
Equitable allocation of vaccines globally.

Transition from procurement of lowest cost manufacturers to procurement from local/regional Production.

Establishment of minimum procurement and allocation by region.

Allocation of vaccine IP and drug substance to regional manufacturers.

Development of policies for a transition period to achieve cost parity.

Establishment of a funding pool for regional manufacturers during a transition period.

Ensure economies of scale in local/regional manufacturing through volume allocation.

Address the entire vaccine manufacturing value chain.

Utilize a mix of policy development and market economics to achieve equity.

Development of skills in manufacturing, distribution, and public health. Market and non-market public policy.
